Product Import-Export (PIE)

Product Data Management Made Easy

Developed as an add-on to Dynamics 365 for Finance and Operations, PIE enables users to effectively manage product data for a large number of products in Dynamics 365. Once configured, PIE allows users to export product data and make modifications with the help of a predefined Excel template.

Without PIE, users have to face the hassle of inserting/updating product data manually. With PIE, users get one click option available to insert/update product data, which saves them time and effort.

High-level Functionalities

PRODUCT EXPORT
Export all/selected products. Modify product data and perform mass updates

PRODUCT IMPORT
Add new product(s) to Dynamics 365

PRICE ACTIVATION
Update the product price using bulk update operation via import; approve all the price changes with a single click

How does it work?

01 — User exports the existing product data in the form of an Excel template

02 — User adds new products and/or updates existing products in the template; For example, user can change the price, sizes, and names of products

03 — After adding/updating the product data, user imports the Excel template back to the system

As soon as the user imports the Excel template, the changes made are reflected in the system.

Key Benefits

- Perform bulk import/export
- Save time
- Reduce human effort
- Reduce common data entry errors

About Indusa

For global midmarket organizations, Indusa is an innovative technology partner that provides end-to-end enterprise software solutions and services to deliver business results: improve productivity, increase efficiency, and reduce costs. With offices in the United States and Asia Pacific, Indusa has a global team of experts to deliver transformative technology solutions to meet all of the needs of our clients from consulting to maintenance, in our core practices – Microsoft Dynamics 365 AX ERP and CRM), Cloud, BI and Predictive Analytics, Office 365 and SharePoint, Magento, Enterprise Mobility, Software Product Development, and Custom Application Management.
